

Paulo Chaves da Silva Filho

Senior Software Engineer

opchaves.com paulo@opchaves.com  Github  LinkedIn

Summary

Senior Software Engineer with 10+ years of experience architecting high-scale cloud architectures, backend engines, and AI-driven platforms. Currently building the next generation of natural language app creation at Thunkable. Expert in Node.js, TypeScript, and React, leveraging Claude Code to accelerate engineering velocity and system delivery.

Skills

- **Languages & Frameworks:** Node.js, TypeScript, React, React Native, Expo, Ruby on Rails
- **Backend & Architecture:** Database Design, Distributed Locks, MongoDB Transactions, REST/GraphQL APIs, PostgreSQL, Redis
- **Frontend & Mobile:** React Router, Next.js, Vite, Tailwind CSS, Redux, AntD, Apollo
- **Testing & DevOps:** Playwright, Jest, Vitest, Docker, Kubernetes, GCP, CI/CD (GitHub Actions)
- **Development Velocity:** Claude Code, Git

Experience

Senior Software Engineer at Thunkable

April 2023 to Current

- Architected and implemented Thunkable Cloud, a backend-as-a-service solution (powered by Supabase) that orchestrates database provisioning, table creation, relationships, permissions, and user authentication under the hood, enabling non-technical users to build applications with a fully-functional backend via natural language prompts.
- Led the full-stack engineering of this backend generation engine across the backend infrastructure, user-facing configurations, and native mobile runtime libraries.
- Engineered a secure API connector featuring backend key-vaulting to safely manage, store, and proxy third-party API credentials for end-user app integrations.
- Optimized core backend systems by introducing MongoDB transactions for multi-document ACID compliance, a distributed lock system (Redis) to prevent concurrent state collisions, and GraphQL DataLoader to eliminate N+1 queries.
- Maintained and scaled high-throughput Node.js backends, integrating external data providers like Google Sheets, Airtable, and Supabase.
- Improved system diagnostics and observability by designing and implementing a centralized, structured logging pipeline.
- Streamlined cross-platform app generation and build flows utilizing Docker, Kubernetes, React Native, and Expo.
- Ensured platform reliability and test coverage using Playwright for end-to-end integration test suites.
- **Technologies:** Node.js, TypeScript, React, React Native, GraphQL, Supabase, MongoDB, Redis, Docker, Kubernetes, Playwright.

Software Engineer at BairesDev

July 2020 to December 2022

Consulting for North American tech companies.

Blazer (formerly Brooks Bell) — Frontend Developer

- Architected 50+ high-traffic A/B tests using Vanilla JS and jQuery via Adobe Target, optimizing UI/UX without direct source access.
- Eliminated "content flicker" by optimizing script execution for sub-second delivery on production sites.

Instructure — Software Engineer

- Enhanced core Canvas LMS components using Ruby on Rails, React, and TypeScript.
- Developed RESTful APIs and complex data models, contributing to the full feature lifecycle for millions of users.
- Built accessible (WCAG) and internationalized (i18n) web experiences for a global audience.
- **Technologies:** Ruby on Rails, React, TypeScript, PostgreSQL, AWS, Docker.

Senior Fullstack Developer (Remote) at Movinga

August 2019 to March 2020

- Developed scalable UIs with Next.js and React, migrating the site to a headless CMS (Gatsby).
- Built Node.js/Rails backends and integrated Salesforce APIs while establishing engineering best practices.
- **Technologies:** Node.js, React, Gatsby, Rails, Postgres, Redis.

Blockchain Engineer (Remote) at Lucidity Tech

February 2018 to April 2019

- Developed high-throughput event processing pipelines using Ethereum, Smart Contracts, and Node.js/Ruby APIs.
- Built React.js frontends and wrote automated tests for Solidity contracts using Truffle.
- **Technologies:** Node.js, Ruby, Ethereum, Solidity, React, Truffle.

Software Engineer at Codeminer42

January 2018 to April 2019

- Collaborated with international customers to deliver scalable solutions using JavaScript and Ruby.
- Acted as a consultant for Lucidity Tech, specializing in blockchain and full-stack development.
- **Technologies:** JavaScript, Ruby, Ruby on Rails, REST APIs.

Software Developer at SEFAZ-PI

September 2016 to April 2017

- Developed high-performance batch jobs using Python to parse millions of records from Oracle to MongoDB.
- Managed MongoDB replica sets for data persistence and operational efficiency.
- **Technologies:** Python, Oracle, MongoDB, Shell Scripting.

Full-Stack Developer at Tartigrado Tecnologia

January 2016 to June 2016

- Modernized legacy Java/Struts2 applications by integrating Spring Framework, AngularJS, and REST APIs.
- **Technologies:** Java, Spring, Hibernate, Angular.js, REST.

Full-Stack Developer at Supra Tecnologia

January 2010 to December 2012

- Developed a PHP-based scheduling system for 1M+ users and led the migration from MySQL to PostgreSQL with Git adoption.
- **Technologies:** PHP, PostgreSQL, JavaScript, Git.

Education

- Computer Science, Loyola University Chicago – 2014 - 2015
- Systems Analysis and Development, Federal Institute of Technology in Piaui – 2013 - 2019
