SUMMARY

Senior software engineer. Backend is most of the work, and a large share of it is React. At Thunkable AI, that means the cloud database on Supabase and Postgres, and the platform MongoDB: version upgrades, storage, and consistency. Before that, Rails and React on Canvas LMS, used by millions of students and teachers.

SKILLS

- **Languages:** TypeScript, JavaScript, Node.js, Ruby, SQL
- **Frameworks:** React, React Native, Expo, Next.js, Ruby on Rails
- **Backend:** PostgreSQL, Supabase, MongoDB, Redis, REST, GraphQL, transactions, distributed locks
- **Infrastructure:** Docker, Kubernetes, GCP, GitHub Actions, Playwright

EXPERIENCE

Senior Software Engineer, Thunkable

April 2023 – Present

- Main engineer on Thunkable Cloud DB, the Supabase and Postgres store behind apps made with Thunkable AI. Describing an app proposes the tables, columns, and permissions in chat. On approval, the integration creates a database in the creator's Supabase account, and the app signs users in and reads and writes that data.
- A large part of the work is React, alongside the Supabase and Postgres integration.
- Built App Secrets. Creators enter third-party API keys in a form, the keys stay on the server, and calls are proxied so the generated app never holds them.
- Plan and own Thunkable's MongoDB code: version upgrades and storage optimization.
- Introduced MongoDB transactions for multi-document writes, Redis distributed locks so concurrent edits stop colliding, and a GraphQL DataLoader that removes N+1 queries.

Software Engineer, BairesDev

July 2020 – December 2022

Consulting for North American product companies.

Blazer (formerly Brooks Bell) — Frontend Developer

- Shipped 50+ A/B tests in vanilla JavaScript and jQuery through Adobe Target, changing production UI on sites I did not have source access to.
- Removed content flicker by getting the experiment script onto the page in under a second.

Instructure — Software Engineer

- Shipped REST APIs, data models, and core UI on Canvas LMS (Ruby on Rails, React, and TypeScript), used by millions of students and teachers.
- Built accessible (WCAG) and internationalized features for that global user base.

Senior Full-Stack Developer (Remote), Movinga

August 2019 – March 2020

- Rebuilt the site in Next.js and React and moved it onto a headless CMS (Gatsby).
- Built Node.js and Rails backends and integrated Salesforce.

Software Engineer, Codeminer42

January 2018 – April 2019

Remote consulting engagement at Lucidity Tech.

- Built Ethereum event-processing pipelines for Lucidity: Solidity contracts, plus the Node.js and Ruby APIs in front of them.
- Built the React app and the Truffle test suite for those contracts.

Software Developer, SEFAZ-PI

September 2016 – April 2017

- Wrote Python batch jobs that parsed millions of records from Oracle into MongoDB, and operated the replica sets those jobs wrote to.

Earlier

- Full-Stack Developer, Tartigrado Tecnologia · January 2016 – June 2016. Replaced Struts2 screens with Spring, AngularJS, and REST.
- Full-Stack Developer, Supra Tecnologia · January 2010 – December 2012. Built a PHP scheduling system for 1M+ users, migrated it from MySQL to PostgreSQL, and moved the code onto Git.

EDUCATION

Systems Analysis and Development, Federal Institute of Technology in Piauí

2013 – 2019

Computer Science, Loyola University Chicago

2014 – 2015
